In conversation with CEO and designer
Achim Pohl.

28 PRODUCT OVERVIEW
Our entire range at a glance.

QUALITY IS EVERYTHING. WITHOUT IT, NOTHING ELSE MATTERS.

Ultimately, the choice of a bathroom isn't just for today or tomorrow, but the long term. Every morning, we start each day in the place where water flows and we end it there too. It's a constant in our lives; the place we visit to refresh and regroup throughout the day. At Viega, that's why we dedicate ourselves to translating our 120 years of expertise and beautiful engineering into bathrooms beyond compare – including the parts beneath the surface. We aim to make every day even better than the last by listening to our customers and by

designing and developing products and services that meet their needs. Always on trend, and even ahead of it – as our approach to digital solutions, design and quality proves. And we make sure to take the time we need to do things properly. That means a better outcome for you and keeps our quality assurance, research and development standards high – so we have what it takes to rise to any challenge.

THE BATHROOM. EXACTLY WHAT YOU WANT IT TO BE

A place where you can be ourselves.

A place you leave feeling different from when you went in.

Where you can transform.

An oasis of quiet or a networked paradise.

A place to retreat from the world or embrace a bold future.

A place that helps us feel ready.

To face the morning. Or the night.

Or anything in between.

A place that gives us what you need, anticipates our feelings and knows what you're thinking.

Where design and technology work in harmony.

And quality is part of the experience.

A place that cloaks sophisticated engineering in elegant understatement.

And where you don't just feel good – you feel inspired.

Where everything comes together.

Or begins afresh.

It's the place that should be exactly what you want it to be.

IMAGINE A BATH-
ROOM THAT ADAPTS
TO ITS USERS.
**THE BATHROOM
OF THE FUTURE IS
A BATHROOM FOR
EVERYONE.**

A conversation on the future of
bathrooms with Dirk Meuleneers,
qualified interior designer and
CEO at Studio Meuleneers.

”THE BATHROOM IS CHANGING. DESIGN HAS TO COME FIRST.“

These days, we're all on a quest for personal fulfilment. And the demographics of the world around us are changing. Our bathrooms are starting to reflect both of those things: increasingly, we're looking for products that don't just have a great design, but also provide comfort and accommodate what our future needs might be. Here, interior designer Dirk Meuleneers from Studio Meuleneers in Krefeld, Germany, talks about what he believes the future holds for bathrooms like these. Showcasing luxurious bathrooms as a lifestyle element, Studio Meuleneers has gained a prestigious reputation in the industry.

VISIGN: What are the basics of a great bathroom, in your view?

Dirk Meuleneers: The materials, colours and shapes used in bathroom designs should be right for the times, but bathrooms also need to be suitable for people of all ages to use. Achieving that comes down to planning that's forward-thinking, a carefully structured space and enough room to move around.

How do you approach the planning process?

We think about what the future is likely to bring and focus on delivering high-quality design that's functional, smart and user-friendly. We start by planning for both a bathtub and a level-access shower, which means we can accommodate all ages and preferences.

What would you advise when it comes to choosing products?

You should look for products that have sophisticated engineering and work in a smart, intuitive way. Viega's Visign range is a good example of that: It provides timeless, high-quality designs, plus features like electronic bath controls that automatically set the right water temperature and fill depth.

Lighting must be an important consideration too.

Definitely. It's all about installing the right light in the right location to achieve the perfect blend of direct and indirect illumination, creating a feeling of security, comfort and well-being. Effective lighting will also enhance the impact of colours and materials.

How does the Viega Visign range elevate bathrooms to a luxury status?

Viega's Visign range has all kinds of great solutions that are right on trend. It offers a whole spectrum of colours, surfaces, materials, lighting options and shapes to cater to all tastes. Everything from the flush plate to the odour trap is also supplied as a single piece, so there's nothing to put together, and the intuitive smart home solutions provide the very latest digital features. In addition the products can be adapted to all ages, which is great considering the demographic changes that we are seeing in society. Viega's Visign range really does provide everything the bathroom of the future will need.

VISIGN IS WHERE TECHNOLOGY AND COMFORT COME TOGETHER.

Our numerous innovations and award-winning design help you transform your bathroom from a basic washroom into a digital, multifunctional experience that exudes comfort and makes you feel great.

01

Visign flush plates

The new Visign flush plates not only leave scope to play with different designs, but also provide an intuitive experience thanks to features such as touch-free sensor-activated flushing and LED lighting, found in our Visign for More 205.

See page 10

02

Visign bathtub controls

The intelligent Multiplex Trio E range of bathtub controls can be positioned anywhere and save you from staying on your feet longer than you have to after a long day at work. Simply use your smartphone to set the temperature and fill depth to exactly what you want.

See page 16

03

Visign bathroom drains

The Advantix Cleviva shower channel is a flexible option that's compatible with any space and the latest colour palettes in bathroom design. Easy to install, it is available in on trend colours that will make it a highlight of any bathroom.

Visign flush plates

FORM CONNECTS WITH FUNCTION.

Featuring clean lines, flawless contours and beautifully tactile surfaces, the Visign for More and Visign for Style flush plate ranges are standout pieces of design. They are available in a host of materials and colours inspired by places across the globe, enabling the range to match all the latest trends in ceramic fittings and tiles. Visign flush plates are compatible with all Viega Prevista flush cisterns and pre-wall systems. Behind their stunning exterior, they conceal strikingly intelligent technical features.

Visign for More – for that extra-special something

Visign for More offers high-quality metal and glass versions, catering to customers looking for an exclusive touch. Featuring a delicate style that appears weightless, the touch-free flushing mechanism in the sensitive versions reinforces the feeling of effortlessness. The wide variety of colours available means that you'll always find the perfect addition to your bathroom.

Visign for Style – stylish options

Visign for Style is all about an unfussy, timeless look with great functions that are easy to use. Its high-quality plastic materials can accommodate any kind of design – and it offers a whole range of colours too.

Visign flush plates

DESIGN FOR THE FUTURE.

Great design doesn't just look good – it also works beautifully. Visign flush plates offer all the benefits that a bathroom designed with the future in mind should have: innovative solutions that meet high standards of hygiene, a range of different installation options, practical ambient lighting and, of course, a stunning look.

Hygiene that comes naturally

To prevent the stagnation that can occur when WCs are temporarily out of use, the hygiene technology in electronic Visign flush plates performs flushing automatically – with customisable intervals and flush volumes. This controlled method of water exchange maintains outstanding levels of water quality in your bathroom.

Illuminating

Providing an atmospheric feature or simply a helping hand in the dark, several of Viega's Visign for More flush plates have the option of an illuminated installation frame that responds when a user approaches by emitting a pleasant light. Visign for More 202 and 205 flush plates are equipped with LED lighting as standard.

Let your creativity run wild

Sophisticated design and high-quality materials have long been indispensable elements of modern bathrooms. Today, bathrooms are designed with at least the same meticulous attention to detail as living rooms, and where individuality is just as important as the space and the quality of the fittings. Our extensive range of colours and materials makes it easy to transform any vision into a reality.

Making a discreet impact

The beautiful design of the Visign range doesn't need over-emphasis. The variants that fit flush with the tiles can be effortlessly installed, yielding a perfectly even surface. This flush-fit design looks particularly captivating in combination with natural stone tiles.

Installation flush with tiles

Visign for Style 24 – perfectly proportioned

With its distinct vertical button design, Visign for Style 24 offers a captivating look that is all about clean lines and meticulous geometry. The bicolour version, available in a range of materials, emphasises this design's unconventional look and delivers that extra special something in any bathroom.

Visign for More 201 – flowing together

The unadorned Visign for More 201 flush plates are available with an alluring range of stainless steel shades and an optional LED installation frame. Their gentle, fluid aesthetic needs no extra features to enhance it and provides a sensual, visually appealing highlight of any minimalist bathroom design.

Visign for More 202 – whatever turns you on

This electronic flush button with LED lighting has a quite literally outstanding design and provides a revolutionary alternative to the more common flat options. Its organic shape cries out to be touched and installation that is flush with the tiles is also available – even with special colours.

Visign for More 205 sensitive – no contact needed

A bathroom that intuitively anticipates what its users want needs a flush plate that activates before it has to be touched. Simply moving a hand in front of the plate triggers the electronic flush with one of two flush volumes – an uncompromisingly hygienic solution that needs no contact and even saves water. The high-quality chrome frame and the level, easy-care glass surface are the perfect complement to elegant, comfort-focused bathroom designs.

**Visign for More 200 –
naturally beautiful**

Wood touches something within us and brings us closer to nature. Made from real wood veneer (stained smoked oak), this flush plate lends the bathroom a warm, organic feature whose gently curved shape enhances its natural appeal.

This Red Dot Design Award winner is also available in a range of other colours, special colours and materials – because creating something unique with the perfect materials is rooted in the Visign for More 200 philosophy. The high-quality materials and surfaces available range from opulent finishes and real wood to rear-painted glass.

Multiplex Trio E2 and E3

02

Visign bathtub controls

MAKE YOUR **BATHROOM**
FIT YOUR LIFESTYLE.

The bathroom is a place to indulge. That's why it needs a design that puts comfort first. Space-saving solutions, high-quality chrome surfaces and convenient smart home controls that store custom settings are just some of the advantages of the Viega range – turning any bath into an extraordinary experience.

**The term “smart home”**

might sound modern, but the concept of a networked house actually dates as far back as 1922 when it featured in Buster Keaton's silent film “The Electric House”. At that time merely an entertaining flight of fancy, by 2010 the smart home had become democratised through the invention of bidirectional wireless standards such as Bluetooth® and WLAN. This ability to transmit data without cables has made the smart home market one of the most innovative and fastest-growing out there.

Visign bathtub controls

DIGITAL DOMESTICITY: THE BUTLER FOR YOUR BATHROOM.

For a true taste of luxury, our new electronically controlled Multiplex Trio E taps are a multifunctional unit that you can use to start a bath running and control the water temperature and flow volume with just a touch of your finger. An illuminated circle displays the temperature, and once the customised fill depth has been reached, the memory function automatically stops the water running. All of the control elements in the Multiplex E range can be positioned anywhere on the wall or the edge of the bathtub. And of course, they are also compatible with the Multiplex Trio and Rotaplex Trio ranges of overflow furnishings.

Viega Multiplex Trio units can also be operated via a WiFi module.

Control elements

Multiplex Trio E3

The display element enables intuitive operation, showing customisable settings for the water temperature, flow volume and fill volume. Touching it gently also brings up a user menu that provides all the additional bathtub filling functions. The temperature selection and on/off functions are combined in a single chrome-plated control element.

Multiplex Trio E2

Two control elements are used to fill the bathtub: one for the on/off function and water temperature, and one for the flow volume and switching to the hand shower. This design keeps the functions separate but provides an all-in-one look.

Drain and filling options

Multiplex Trio with Visign MT5

This combined flow, drain and overflow furnishing features an appealing ultra-slim design that fits especially well with slender bathtub bodies. Its high-quality, unobtrusive appearance won it the Red Dot Design award. For the first time, it is now also available in special colours.

Multiplex Trio F base filling unit

A bathtub feature that's a real star. This smart alternative to wall-mounted filling units is a new way of getting water into your tub. The water emanates from the base in a star-shaped pattern and emits hardly any sound.

Multiplex Trio with Visign MT9

This elegant flow and drain model allows the fill depth to reach as much as 5 cm higher than normal, providing a little extra luxury and making more of the space available in the bathtub. All it takes is one press to increase the water level. A range of special colours is available to suit even unusual design needs.

Advantix Vario

The Viega Advantix Vario shower channel features a customisable length and blends seamlessly into the latest bathroom design concepts. Straight, U-shaped and corner versions can all be installed easily.

Visign bathroom drains

EVERY DETAIL A MASTERPIECE.

Turning a bathroom into a centre of well-being requires elevated design standards and a more bespoke approach. Viega's extensive selection of high-quality bathroom drain systems helps you take things to the next level.

Open up a fantastic new world of design options with Advantix for heavy use, Advantix Vario with its range of shapes that deliver maximum installation flexibility, and the uniquely elegant Advantix Cleviva with its surface-guided single-point drainage system. The gratings in the Visign product line also provide visual highlights, while the drains that accompany them reliably prevent odours from spreading and maintain high performance standards. Our products have been the recipients of numerous design awards.

Visign bathroom drains

BEAUTY AND PRACTICALITY AS ONE.

With the continuous tiling effect they create, floor-even showers are often a highlight of bathroom designs. However, tile gradients place certain technical limitations on them. That's where the Advantix range comes in. Its smart drainage solution that extends along the whole shower length means fewer restrictions and allows even large tiles to be laid in a way that looks great.

Advantix Vario wall drain

Advantix Vario – a consistently stunning option

The Advantix Vario wall drain is another elegantly designed solution. The stainless steel grating runs horizontally along the wall, allowing the floor covering to be laid evenly right up to the wall with no need to cut gradients into it. It's even possible to install this solution without the slotted grating element.

Uncompromising variety

You shouldn't have to compromise on your dream design. Advantix Vario is beautifully compatible with your requirements and existing bathroom space – whether you're looking for a stand-alone element or something installed in or on the wall. It also comes in three different versions: straight, L-shaped or U-shaped. And for renovation projects, the wall drain and shower channel are available with an installation height of 70 mm. The Advantix Vario models work in perfect harmony with any bathroom environment, whatever your colour scheme might be. Their delicate stainless steel gratings provide a perfect transition point to any tile pattern, while the optional tile trim rails open up even more

design options. No wonder that these high-quality products have been the recipients of renowned design awards.

Advantix – because less is often more

Enabling tiling options with or without edges, Advantix shower channels prove that high-quality design concepts can be brought to life in projects with a range of budgets. They add the perfect accent to the nine different grating designs, delivering a minimalist, unobtrusive and elegant look together with outstanding drainage.

Advantix Cleviva shower channel

Advantix Cleviva – unlimited possibilities

Elevate any bathroom to a spa-like experience with the five colour options available: stainless steel matte, stainless steel copper-gold-coloured matte, stainless steel gold-coloured brushed, stainless steel champagne matte and stainless steel black matte. Other special colours are also available on request. The insert for the shower channel profile can be provided with one or two inlet openings, opening up two additional design options.

A clean solution

Advantix Cleviva solutions aren't just elegant: they're also easy to use and maintain impeccable hygiene standards. The open drain profile prevents dirt from building up and can be simply wiped clean, so there's no need to remove a grating.

Perfectly positioned

The flexible Advantix Cleviva shower channel can be installed anywhere within the tile surface: in the middle, off to the side or even directly on the wall. As it is level at both ends, the shower profile can also be extended to any length.

Odour trap for washbasins – flawless down to the last detail

Available in bottle and pipe versions, our odour traps meet the same high standards of quality and design that we apply to everything else we do. They come in high-gloss chrome-plated brass as standard, but are also available in special colours – and all with outstanding flow properties, providing the perfect solution for any bathroom. Viega universal and slotted valves are either available in a version that is not lockable or come with an innovative locking mechanism. They are opened and closed by gently pressing on the cover – a contemporary addition.

Eleganta odour trap for washbasins

Tileable variant for truly bespoke design

Make showering an experience

Whether you're installing a rainfall or waterfall style of shower, the drainage technology needs to live up to the same standards as the shower itself to create a relaxing experience. Our matching drains are the perfect complement to your Visign bathroom design and come in a range of shapes, from round versions to suit flowing contours to the squared-off angles of Advantix gratings for linear and graphic architectural styles.

These and other designs are available as floor drain gratings.

Colours, shapes, materials

FROM BATHROOM TO **SENSORY EXPERIENCE.**

Colours, materials and shapes are more than just visual highlights: they paint the feelings that a bathroom seeks to awaken. And because every one of us perceives them differently, they need to be placed in the context of an overall design – as elements working within an environment – to be viewed as they're genuinely intended. Whether they deliberately use juxtapositions or take a homogeneous approach, interiors with features that work in harmony are what transform a bathroom into a coherent whole that appeals to the eyes and the senses.

ARTEFAKT was given the unique opportunity to develop an entire product range, and in doing so, approached the process from both a strategic and a design-focused viewpoint.

“Good design isn’t prescriptive. It needs to enhance the different lifestyles of the people who use the products in question every day. There has to be an appropriate balance between design and function in order to meet various users’ needs. But the function, operation and price all matter just as much as the design, of course: they too have to achieve the right balance so that they can accommodate different needs and market segments. A facet of bathrooms that is immediately striking is their need for products that work in harmony with complex surroundings. Visign for More 200 flush plates have been designed to do exactly this, with easy-to-use control elements that are the main feature of the minimalist design and lend the plates a strong identity. Their design blends seamlessly into all kinds of environments and is available with a vast range of materials and colours for beautifully bespoke options.

The material and surface properties are themselves a key factor in the design and strategic focus of the Visign family, and provide strong links between its various members. Wood, glass and metal options in a range of colours and surface finishes give the products an even more unique identity in the feelings they awaken. Even surfaces like copper provide an ideal way of enhancing products, bringing them in line with today’s strong focus on making bathrooms a sensory experience. Visign for More 202 products are one example of this appeal to the senses, with their enticing symbiosis of shapes that appear contrasting. They make users want to touch them and operate them – to find out how they work. Using the very latest technology is also a vital part of design as it allows us to reach new standards in the all-important area of hygiene. The new Visign for Style 25 sensitive product incorporates the touch-free activation method that Viega launched back in 2007 – with state-of-the-art technology at an excellent price. A thoroughgoing success.

Tastes might vary, but great design always makes an impact. It creates its own style, combining the latest technology and consumer demands into everyday products that shape the future. Quite simply, it shapes the future. We love being a part of that – and that’s why we love our work so much.”
